EDUCATION

B.E – CSE	Sri Eshwar College of Engineering	**CGPA : 8.08(upto 3rd semester)**	**2024-2028**
HSC	Sri Lathangi Vidhya Mandir Matric Higher Secondary School	**85.3 %**	**2023-2024**
SSLC	Sri Lathangi Vidhya Mandir Matric Higher Secondary School	**94.6 %**	**2021-2022**

INTERNSHIP

Software Development Intern – Autom Consultancy Services - Certificate 2025 Engineered and deployed scalable full- stack systems using MERN stack and NestJS microservices, architecting modular RESTful APIs with JWT authentication, role-based access control. Automated cloud workflows on AWS (EC2, S3), and established CI/CD pipelines with GitHub Actions. Practiced Agile delivery with branching strategies and peer code reviews. Tech stack: MongoDB, ExpressJS, ReactJS, NodeJS, NestJS, React Native, TypeScript, AWS (EC2, S3)

PROJECTS

Stock Trend Classification Tech stack: Python (Flask), scikit-learn, joblib, React, Tailwind CSS - GitHub

Designed and developed a web-based platform for predicting stock price changes using ensemble machine learning models. Implemented a backend with Flask to serve predictions from a trained voting regressor (Random Forest, Gradient Boosting, SVR) serialized with joblib. Built a responsive frontend in React and Tailwind CSS to collect user input, display prediction results, and visualize historical trends. Integrated RESTful API communication between frontend and backend for real-time inference, ensuring optimized performance and user experience.

Event Management Portal – Tech stack: React, Node.js, Express.js, MongoDB – GitHub

Developed an Event Management System which empowers staff to file event proposals, routes them through role-based approvals, and automatically launches media, catering, guestroom, and transport follow-ups while dashboards track status and analytics through completion.

Resume Analyzer – Tech stack: React, Tailwind CSS, Flask, NLP, scikit-learn - GitHub

Developed a web-based application that analyzes resumes against multiple job descriptions using advanced NLP techniques. The backend leverages spaCy, NLTK, and scikit-learn for skill extraction, experience detection, and similarity scoring (TF-IDF and cosine similarity). The system identifies matched and missing skills, evaluates experience levels, and generates personalized improvement suggestions. Users can upload multiple resumes and job descriptions, and receive interactive, company-specific analysis with visual match scores and skill breakdowns. The frontend, built with React and Tailwind CSS, provides a modern, responsive interface for real-time analysis and insights.

CERTIFICATIONS

Node JS, Express, MongoDB (Udemy)	**2025**
ReactJs Masterclass (Udemy)	**2025**
Mastering Data Structures & Algorithms using C & C++ (Udemy)	**2025**
C Spoken Tutorial Training	**2024**

CODING PROFILES

Leetcode | **KNIGHT** | Max Rating : **1924** | **Global rank 194** in Leetcode Biweekly contest 175 (among 41000+ participants)
Solved 200+ problems | Profile Link
Skillrack | **Solved 1000+** Problems | Profile Link
Code Chef | Solved 300+ Problems | Max Rating : **1183 |** Profile Link

ACHIEVEMENTS

Marketing and Outreach Lead At Technical Club SECE
Shortlisted for round 3 in **Adobe India Hackathon**
Shortlisted in round 2 for in **TechNova: Igniting Brilliance (Season 2)**
Winner of **Freshathon 2025** by SECE

TECHNICAL SKILLS

Programming - Java | C | C++ | Python | HTML | CSS | MYSQL | Data Structures and Algorithms
Tools - VS Code | Git | GitHub | MySQL Workbench | Google Colab | Canva
Backend & AI Integration- Node.js | Express.js | Flask | FastAPI | MongoDB | REST APIs | API Integration
